

### **Setting Your Anniversary/True-up Date with NYSEG**

For residential solar systems, your net-metering credit rolls over from month to month as kWhs, but your account is trued up and cashed out once a year at the wholesale electricity price. This date is your Anniversary/True-up Date. To ensure that you get full economic value for your solar, the most appropriate time of year for this date is typically March or April (when you have typically used up all of your net-metering credit from the summer before), but by default this date is still set by NYSEG as the month and day of your final interconnection approval. Thus, all solar customers should check their default date, and change it to March or April. Remember that you don't actually choose a single date, but rather a month. If NYSEG currently checks your meter late month, then you would want to choose March for your Anniversary Date; if early-month, then you'd choose April. You need to request this change by sending an email entitled "Solar Customer Contract True-up Date" to [NYSEGBackOffice@NYSEG.com](mailto:NYSEGBackOffice@NYSEG.com) with the following information: Your name, the service address, your NYSEG Account Number, and the month that you would like your contract "true-up" month to take place.
