

Below is an Idea of what you'll see on your utility Net meter.

The main number shows your cumulative kWh

The Arrow will point to the left and the display will read "Received" when power is being sent from the PV array to the grid.

This indicates you are "selling" power to the grid.

The Arrow will point to the right and the display will read "Delivered" when receiving power from the grid.

This indicates you are "buying" power from the grid.
